VALENTIN ENCHEV

QA Engineer

+357 99155670 valentinenchev16@gmail.com ValkaYuh.github.io
Sofia, Bulgaria · Relocating to Cyprus

SUMMARY

QA Engineer with 2+ years across manual and automated testing (Java, Python, Selenium) on iOS, Android, and Web. Built 100+ backend automation tests, led manual test suite re-writes through major redesigns, and ran load testing with Apache JMeter. Self-taught in ML as well, built a Valorant match-prediction model hitting ~75% accuracy across all pro tiers.

EXPERIENCE

Software QA Engineer Internship

TalkRemit — 11/2022 - 05/2023 — Sofia, Bulgaria

Onboarding and hands-on experience with the quality assurance methodologies.

- I quickly adapted to using Java, a programming language that I had never used before, and started contributing to the backend automation testing project.
- Contributed to the manual testing suite, both updating old test cases and creating new ones.
- Executed regression, smoke, and exploratory testing to catch defects pre-release
- Got familiar with Jira and the general communication/work style.

Software QA Engineer

TalkRemit — 06/2023 - 01/2025 — Sofia, Bulgaria

Started working full-time.

- Contributed significantly to the automation testing project (100+ backend tests written).
- Played a key role in the transition from our in-house KYC system to a third-party one, by figuring out first how it works and then writing test cases for it.
- Reported and helped to find the cause of multiple live bugs which were hard to troubleshoot.
- Utilized Apache JMeter to create a load testing suite.
- Re-worked our front end manual test suite since we had a major re-design.

Independent ML Project — Valorant Esports Prediction Model

Self-directed (solo) — 02/2025 - 07/2026 — Targovishte, Bulgaria

Did my own thing for a while.

- Created a comprehensive scrape script which would collect all the data that I needed for my ML model.
- Created an ML model that would predict the outcome of Valorant esport matches.
- Analysed the feature importance and further improved the model's capabilities by removing unimportant features and engineering new ones.
- Validated the model's real-world edge by backtesting predictions against live betting markets, confirming consistent positive ROI

Machine Learning

Pytorch · CatBoost · Autogluon

Other

Godot · Hardware · Troubleshooting

KEY ACHIEVEMENTS

Automation testing
Wrote 100+ automated backend test cases

Manual test suite re-write
I edited all existing test cases related to our front end and added new ones as needed since we had a major re-design on our mobile apps

ML predictions
Achieved ~75% accuracy (eval data) on match outcome predictions across all tiers of pro play in Valorant (VCT, VCL, T3, GC, Collegiate)

Game Jam
During the Brackeys 2025 game jam I created my first game "FlightInc", which got Rank #142 in the Innovation category and overall rank of #664 (out of 2199 entries)

CERTIFICATION

IELTS - Academic - CEFR Level C1
Issued by the British Council - 2022
